

ABSTRACT OF THE DISCLOSURE

A method for creating a hand colorable panel with a set of indicia for guiding the user in coloring to create the image. The method includes providing an image in digital form into a memory in a programmable computer, assigning pixel locations to the image, assigning color or shade palette values to the pixel locations, and printing, under the control of the programmable computer, indicia representing the color or shade palette values on a panel, so that a user colors over the indicia, using colors assigned to the indicia to create a hand-colored image on the panel.
